To Whom It May Concern:

The SmartFreshSM Quality System is designed to maintain apple quality during storage by blocking ethylene from triggering over-ripening of harvested fruit. SmartFreshTM technology leaves no residue on fruit and has been determined to be a safe and effective quality management tool.

Today, SmartFreshTM technology is registered in over 40 countries and AgroFresh continues to seek registrations in additional markets. The SmartFreshSM Quality System has gained global acceptance and has been thoroughly reviewed and approved by the United States Environmental Protection Agency (EPA), the European Food Safety Authority (EFSA), the European Union (EU), and the Canadian Pest Management Regulatory Agency (PMRA).

The US EPA registration number is as follows:

- SmartFreshSM EPA Registration Number 71297-2
- SmartFreshTM SmartTabsTM EPA Registration Number 71297-3
- SmartFreshTM ProTabs U.S. EPA number 71297-10

Our customer partners also confirm the following:

- All SmartFresh technology application spaces have been verified to be sufficiently airtight in order to ensure successful SmartFresh technology applications.
- SmartFresh technology application room identification and measurements have been verified to ensure accurate dosage.
- All SmartFresh technology applications were performed by trained personnel.

Respectfully,

Edgardo Castaneda
Director of Manufacturing and Operations
